Re: Pier 91 facility tanks 2709 and 2710

Dear Ms. Buller:

We have received your letter of September 26 regarding the status of tanks 2709 and 2710 at the Pier 91 facility. The letter, confirming what you had previously told me on the phone, indicates that these tanks currently exist as tanks 113 and 114. The letter and the attached construction schedule indicate that it is Chempro's plan to upgrade these tanks in some manner so as to "meet the required standards of WAC 173-303-640". This information is inconsistent with the information provided in the permit application regarding these tanks. The application provides no information about upgrading existing tanks.

We have reviewed the permit application and found the design information presented there to be tentatively acceptable. Consequently, the Draft Permit specifically references the designs and specifications from the permit application. The tanks, whether new or existing, must meet these specifications, including Figure D1-23, Drawings 43007 and 43008 (Appendix D-8), and the integrity assessments in Appendix D-9. If you have any questions on this matter please give me a call at 459-6993.

Sincerely,

Douglas Brown
